Art Unit: 1724

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Assalini.

Assalini discloses a filter having a rotating arm for moving across the top surface to dislodge solids, as claimed.

3. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by PCT Document WO 00/21635.

The PCT document discloses a filter having a rotating arm for moving across the top surface to dislodge solids, as claimed.

4. Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Ferrara or Schwartz.

Ferrara and Schwartz each disclose a filter having a rotating arm for moving across the top surface to dislodge solids, as claimed.

Art Unit: 1724

5. Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 9-21 are allowed.

The recitation of a downflow filter having a dislodging member for moving across the top surface or the filter bed to dislodge solids, wherein the filter is a reactor with a mixed liquor with microbes patentably distinguishes over the prior art of record.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other references of interest include Schreiber, Jeris and Winter, which disclose microbial filters having agitators within the filter bed.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher Upton whose telephone number is 571-272-1169. The examiner can normally be reached on 7:30-5:00, off every other Monday.
